<Manufacturing Process of Hair Scissors>

There are couple of different ways to manufacture hair scissors.

Welding the blade and handle together is the most commonly used method in many factories.

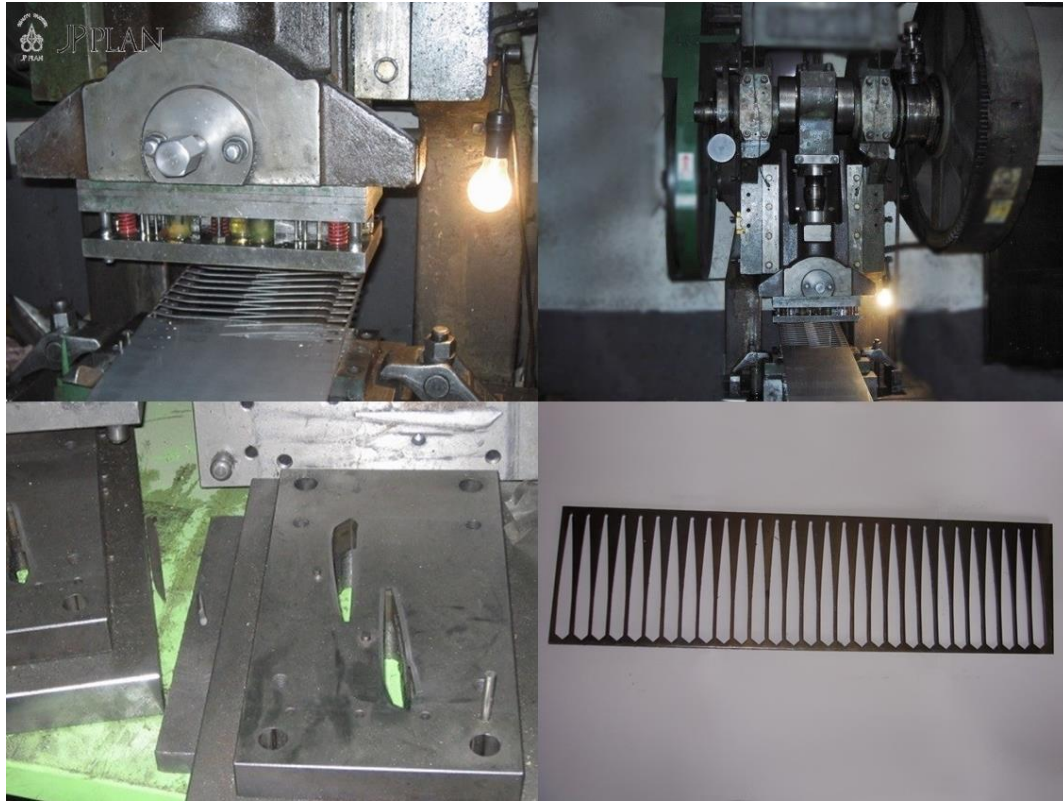

Different types of the Blades and Handles

1. The material for the blades – Stainless steel plate

2. Shearing process for the blades

* The manufacturing process of handles are different from the blades. It is called "lost wax" process and we will talk about this in a later issue.

3. Welding the blade and handle together

4. Grinding welds - Smooths it out
